

Andrew,

Thank you for the follow-up. I would be glad to provide feedback. The dispensers are so much more durable than the plastic ones. These dispenser perform well and are true to your marketing of being tamper resistant. No one has gotten inside or used one for self-harm.

We chose the dispensers for the stainless steel make and tamper proof design. Additionally, they have not rusted are durable and cleanable as well. I have not found a product on the market that equals yours.
